November 3, 2006

Mr. Michael Gearheard, Director
Water Division, U.S. EPA Region 10
Attn: Dave Ragsdale
1200 Sixth Avenue
Seattle, Washington 98101

Dear Mr. Gearheard:

In accordance with 40 CFR 130.7 and Section 303(d) (1) of the Clean Water Act, the Department of Ecology submits the *Henderson Inlet Watershed Fecal Coliform Bacteria, Dissolved Oxygen, Temperature, and pH Total Maximum Daily Load (TMDL)* with attached *Implementation Strategy (Vol. II)* for your review and approval. Although the titles of these documents contain multi-parameters, this TMDL only establishes load allocations for fecal coliform bacteria within the watershed.

We are asking for EPA approval for load allocations addressing fecal coliform. The TMDL addresses ten Henderson inlet and tributary segments on the 2004 303(d) list. The total number of TMDLs within this submittal is five according to the 1996 counting convention. The table in the enclosure clarifies and counts the water body segments addressed in this TMDL by showing their names, listing identification number, and the waterbody identification number (WBID).

The enclosed TMDL Study and Implementation Strategy summarize all requirements and other information needed to determine the statutory and regulatory adequacy of this TMDL. In addition, the implementation strategy also documents the public participation during the development of the TMDL and contains a responsiveness summary at Appendix A.

I believe that the complete work outlined in the enclosure meets the objectives of the CWA and will result in achieving water quality standards for fecal coliform in the Henderson Inlet Watershed. Your quick review and approval will be greatly appreciated.

If you have questions or need clarifications, please contact Ron McBride of my staff at (360) 407-6469.

Sincerely,

David C. Peeler
Water Quality Program Manager
